

# External – Door Entry Options

The digital door communications system offers various ready-to-connect door stations for fast and clean installation on walls. Only two wires are required to supply the components of the digital door communication system with voltage and to transfer all the audio and video signals.

This means for example an existing doorbell system can easily be replaced by the digital door communication system. Instead of laying new cables, the existing cables can be used.

Speaker and 1-gang LED Switch
